Non-Final Official Action

Status of the Claims

Claims 1-3 and 10-12 are rejected under 35 USC §102.

Claims 4-9 and 13 are unexamined.

Multiple Dependency

Claims 4-9 and 13 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim further includes a multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-9 and 13 have not been further treated on the merits.

Rejections under 35 USC §102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 and 10-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Vrhel, Jr. et al (United States Patent No. 6,560,726 B1).

Art Unit: 2113

As per claim 1, Vrhel discloses:

Method to secure the execution of a program in an electronic assembly comprising information processing means and information storage means, characterised in that it consists in checking the execution time of at least one sequence of said program with respect to normal predetermined execution time of said sequence (column 5, lines 6-8).

As per claim 2, Vrhel discloses:

Method according to claim 1, characterised in that is consists in checking during the execution time of at least one said sequence of said program that the execution time of said sequence corresponds to normal predetermined execution time of said sequence (column 5, lines 14-17).

As per claim 3, Vrhel discloses:

Method according to claim 1 or 2, characterised in that it consists in checking the point of arrival of said sequence on expiry of the normal predetermined execution time of said sequence (column 5, lines 9-14).

Claims 10-12 are the electronic module which performs the steps of method claims 1-3 and are rejected in the same manner.
